Executive Summary

DGS Corp is a tribally owned 8(a) technology firm that delivers cutting-edge, cost-effective IT solutions to government agencies and international organizations. We stand out in the information technology industry by combining deep technical expertise with a relentless focus on mission success, innovation, and operational excellence.

What Sets DGS Corp Apart

Proven Leadership: Our executive team brings superior experience in managing complex, high-impact programs across cybersecurity, cloud migration, and software development.

Mission-Driven Innovation: We don't just deliver IT services, we engineer solutions that transform operations and empower agencies to meet their strategic goals.

Agile and Scalable Solutions: From small-scale deployments to enterprise-wide transformations, our solutions are built to scale and adapt to evolving mission needs.

Trusted Government Partner: We have a strong track record supporting agencies like DoA, HHS, DISA, DoS, and DoI, with a deep understanding of federal compliance, security, and operational requirements.

Core Competencies

Cybersecurity: Cybersecurity services that focus on protecting systems, networks, and data against evolving threats. Our capabilities include vulnerability assessments, predictive threat analysis, incident response, digital forensics, and security compliance support. We help organizations strengthen their security posture, reduce risk, and maintain mission readiness in high-assurance environments.

Software Development: Full lifecycle software development and application modernization services tailored to mission requirements. Specialization includes modernizing legacy applications, designing secure enterprise systems, and implementing DevOps-driven development practices. This approach improves system performance, scalability, and long-term sustainability.

Network & Enterprise Solutions: Design, integration, and management of enterprise network solutions that support secure and reliable operations. Experience spans network architecture, system integration, virtualization, and enterprise platforms across Windows, Linux, and hybrid environments. Solutions are built to support resilient infrastructures that scale with mission demands.

Core Competencies

Data Center Optimization: Services focused on improving data center performance, efficiency, and reliability. We have infrastructure consolidation, virtualization, storage optimization, and system performance tuning. The goal is to reduce operational complexity and cost while enhancing availability and security.

Artificial Intelligence & Machine Learning: Application of AI and machine learning to enhance situational awareness, automate processes, and improve decision-making. Capabilities are predictive analytics, intelligent automation, advanced data processing, and AI-enabled threat detection. These solutions enable proactive operations and reduce workload.

Cloud Hosting: Secure cloud hosting and migration services across leading cloud platforms. Supports full cloud transitions, hybrid architectures, and ongoing cloud operations. This approach ensures scalability, compliance, and performance while modernizing infrastructure and applications.

Program Management: Disciplined program and project management services supporting complex, multi-stakeholder initiatives. Services include planning, execution, resource coordination, and performance tracking to ensure objectives are met on schedule and within budget.

Administrative Support: Administrative and operational support services are designed to enhance organizational efficiency. This encompasses scheduling, reporting, compliance tracking, and back-office operations supported by experienced personnel and process automation. These services streamline workflows and allow organizations to focus on mission priorities.
